

Website Name: WildlyCurious

Topic Description: WildlyCurious will be a website that allows users to post about anything they know or experience that is nature-related. The platform will firstly allow anyone to make an account of their own, maybe with an age limit. It's supposed to serve as a virtual space that holds nature data and can serve as a place to learn for those wish to know more about nature. The goal of my website is to garner a nature-based database of sorts that is growing from curious users' inputs, with their "posts" and interaction with others.

Page Names:

- Home
- Browse Knowledge
- Post Your Own
- User Profile
- Discussion Forum (Separate from the Browse Knowledge page)

Description of Data Stored:

- We will be storing a list of posts about anything nature-related (plants, animals, non-living things, etc.) and along with that, descriptions of those, such as the color or climate of an onion.
- We will also be storing user accounts (hopefully), with a username, password, email, and MAYBE a profile picture. Also posts will somehow be linked to whichever account they came from, probably from the post author putting their name on the post when posting.
- Discussion forum posts will also be saved, but those will be more serious than the regular browsing posts (less images, more words, so more word-based than anything else)

Manipulation:

- Admins will be able to delete any post, but users will only be able to delete their own post
- Admins can view any post and so can users (no private posts)
- Admins can also remove accounts, so that account's data/posts/forum posts will be able to be deleted as well
